

FOR IMMEDIATE RELEASE

IDMWORKS and BiTKOO announce strategic partnership

Miami, FL (September 1, 2011) IDMWORKS is pleased to announce the successful partnership with BiTKOO for their market leading fine-grained authorization product “Keystone”.

The IDMWORKS Identity and Access Management experts, have been delivering reference quality solutions since 2004 to public and private sector clients in the US and Canada. The IDMWORKS’ team of experts is certified and working with customers to demonstrate the exceptional value offered by the **Keystone** product suite within a heterogeneous development environment and complicated security landscape.

“Keystone’s value is realized within the first few minutes of a Demonstration or Proof of Concept. Developers are impressed by the flexibility and immediately begin to think of the opportunities to replace their archaic methods of implementing authorization within their enterprises. Our business community and Auditors welcome the adherence to standards (XACML 3.0) and consistency that Keystone introduces,” said Paul Bedi, Managing Partner and Co-Founder of IDMWORKS.

Doron Grinstein, CEO of BiTKOO said in a statement, “IDMWORKS has proven expertise in successfully implementing identity and access management projects. I’ve had the pleasure of working with the fine implementation engineers at IDMWORKS and can attest to their high caliber and experience in this field. I am very pleased to announce this partnership, which represents a win/win for our customers as well as for BiTKOO and IDMWORKS. I have no doubt that this relationship will help us expand even more rapidly in the fine-grained authorization space. It has seen tremendous growth in the past year and the projection for 2012 is that the market will more than double compared to 2011. I am very committed to our partnership and I look forward to serving many joint customers.”

About BiTKOO

BiTKOO is the global leader in XACML and fine-grained authorization software. More companies rely on Keystone, which is the first hybrid RBAC/ABAC XACML authorization software, than all other vendors in the field combined. Founded with the belief that identity and access management should be as simple and available as the telephone dial-tone, BiTKOO empowers customers to concentrate on their respective domains, while providing them with the knowledge and peace of mind that their identity and access control is provided by best-of-breed and standards-based solutions that are scalable and secure.
