

## BiTKOO's Authorization Management Engine for Enterprise Policy Administration, Decision and Enforcement

### Key Features:

- BiTKOO patent pending technology - Federated Authorization
- Any-grained authorization and access control
- SOA security
- Intrusion detection and protection
- Single sign-on with any third-party platform
- Delegated administration
- Segregation of duties enforcement
- Disconnected mode authentication support
- High performance caching
- Graphical conditional expression builder based on business rules, supporting dynamic rules and complex attributes
- Robust reporting
- User request for access
- Application-specific or enterprise installation options
- Broad platform support (Java, .NET, .NET Compact Framework, Delphi, COM)

Keystone's comprehensive and holistic approach to Identity and Access Management (IAM) is the most sophisticated, fine-grained authorization and access control solution on the market. It provides an abstracted layer of security web services, unifying silos of authentication and authorization sources throughout an enterprise.

Keystone is highly flexible and simplifies the administration and management of IAM. It is built to support complex and in-depth audit and security compliance requirements by approaching authorization management across the enterprise and down to the most granular level. Using plug-in integration architecture, Keystone performs with existing IAM tools and infrastructure, ensuring enterprises of all sizes maximize their IAM investments.

### Keystone offers solutions for:

- Regulatory Compliance
- Fine-Grained Authorization Management
- Enterprise SOA Security
- Enterprise Single Sign-On

## Keystone empowers enterprises with comprehensive *controls* over data and systems access.

- Simplified and holistic authorization management
  - Consumable set of IAM services for rapid, consistent, auth/auth coding
  - Federated identity
  - Removes redundant authorization policy data and inconsistencies in policy interpretation and enforcement
- Time and cost savings
  - Standards-based framework provides significant cost/time savings in application development
- End-to-end security for regulatory compliance
  - Audited events for every transaction/workflow type
  - Improves unified compliance across applications

## BiTKOO's pioneering approach to authorization management has positioned Keystone as a leading IAM solution.

- Externalizes authorization management from applications
- Serves as the "bridge" across the gaps in existing and disjointed IAM-related systems and tools
  - Plug-in architecture interoperates with any third-party infrastructure component, able to consume authentication from any source and report on any user action for consistent compliance management
- Approaches the management of authorization and access intuitively and dynamically, reflective of real-life use cases
  - Policy-driven rules
  - Support for disconnected mode
  - Robust reporting and forensics down to a granular level
- Simplifies administration across the enterprise with an easily manageable solution
- Shortened implementation timeframe
